

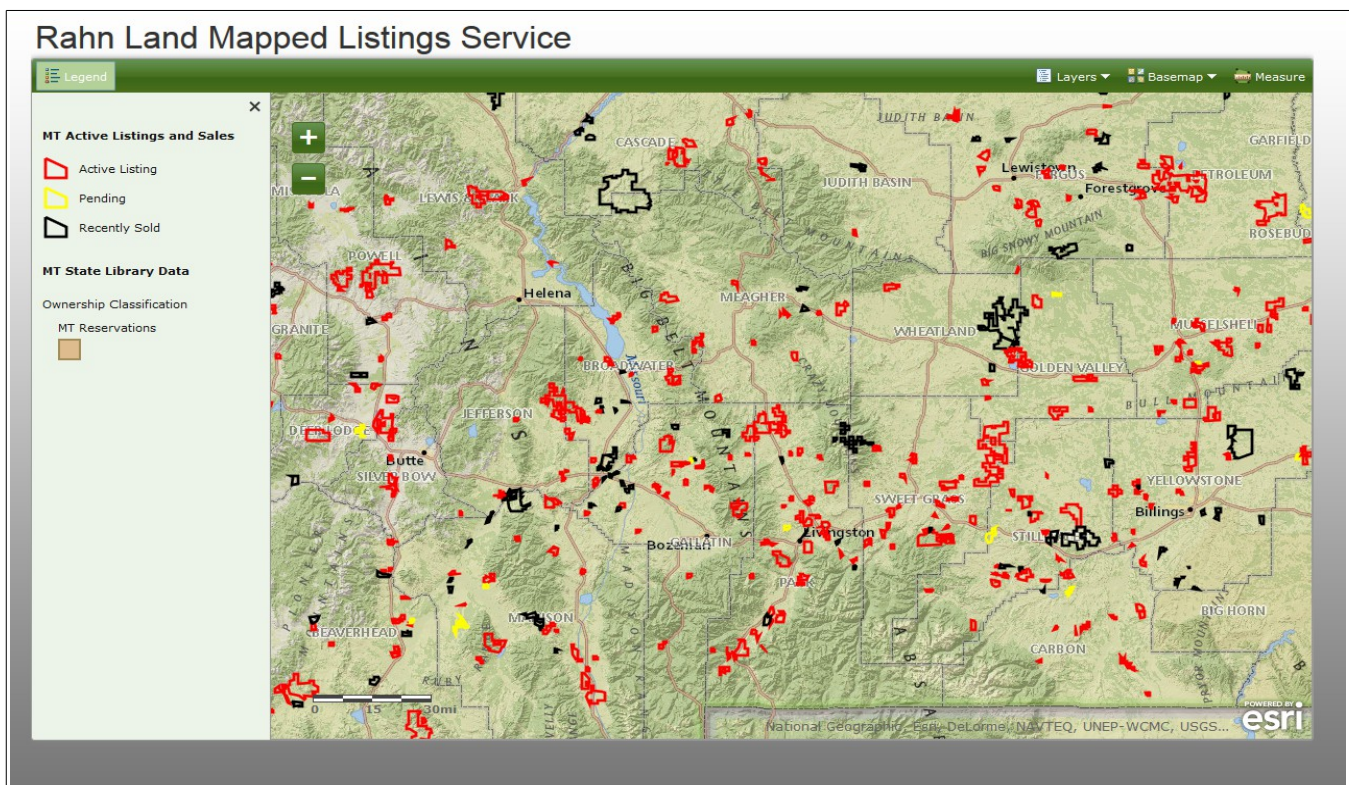

# Mapping & GPS for Farm & Ranch Brokers: What's available now, and where is the future headed?

*Andy Rahn from Rahn Land, Inc. will give a presentation on current available mapping and GPS options for farm & ranch brokers, including a newly available online mapping service from Rahn Land. Also, Andy will discuss what new technologies and services we can expect in the near future.*

*New technologies are making mapping and GPS more accessible and less expensive for more users. In the past we have been limited by complicated and expensive mapping and GPS software and hardware. Increasingly, will be able to use more user friendly on-line services and our existing smart-phones, laptops, or tablets to make our own maps and use GPS in the field.*

*Rahn Land has created an online mapping service that displays active farm and ranch listings, and pending and recent sales. Additional useful layers include parcels from the Montana Cadastral service, public lands, legal descriptions, conservation easements, wilderness areas, and tribal lands. The layers are current and regularly updated. Listings that are  $\geq 300$  acres are included, and there are currently 600 mapped listings and sales.*
